PATENT

Attorney Docket No.: WEAT/0389

Express Mail No.: EV 349852660 US

ABSTRACT OF THE DISCLOSURE

The present invention provides an improved hydraulic overshot tool. The

overshot tool mechanically engages a cylindrical body downhole attempting to be

retrieved. In the event retrieval is unsuccessful, the overshot tool may be

hydraulically released from the cylindrical body. The release function employs a

pressure differential within the overshot tool, but without necessity of a nozzle within

the bore of the tool.
